
Fetuses with a monogenic diagnosis
Reported before 1 July 2026
3 cohorts (China, Austria, United Kingdom)
299 fetuses, 735 findings
Largest cohort with variants: 185 fetuses
Used for period comparison
Reported from 1 July 2026
9 publications, 153 fetuses, 367 findings
Two independent extractions
With reported variants: 66 fetuses
After model training cutoffs
Primary analysis
Gene ranking from the same findings
Findings as text
Large language models
Claude Haiku, Sonnet and Opus 5.5
Four open-weight models, 8 to 20B
Top 50 genes as HGNC symbols
Findings as HPO terms
Exomiser 15.1.0, phenotype only
hiPHIVE and human-only
HPO semantic similarity
(Resnik, 4,354 genes)
Ranked gene lists
Analyses
Primary
Top 10 in fetuses from 1 July 2026
Period comparison
Adjusted and propensity-matched
Robustness
Recall probe, shuffled findings, rewording
Retrieval
Similar cases or Exomiser candidates
Clinical simulation
Variants in benchmark exomes, Exomiser
